# PRASHANT SHAH

CHAIRMAN

Namaste!

October is here! The month of festivities. The month of **NAVRATRI**.  
But most importantly, the month where we are moving towards a more normal life.

A more practical life.

Covid has now become an invisible part of our life.  
Wear a mask and sanitize and go about your normal life.  
We are humans, you can put us down, you can't keep us down.

And at Kaps3, we believe in the exact work mantra.  
When we are faced with difficulties, we fight, we solve and we come out on top of it.

This month marks the third edition of '**The Practical**'  
And I am really liking how it's getting a good viewer base.  
We are getting feedback and reviews from Doctors and staff from far off places too!  
And that's so encouraging! Thank you!

We also had a lovely **MUSICAL EVENT** to celebrate our teams hard work at Ghazipur, U.P.

The October issue presents some insightful articles and a look into the life and celebrations at Kaps3.

I hope you enjoy this month's issue.

Kindly share your valuable insights.

# HARSHIT PRASHANT SHAH

MANAGING DIRECTOR

Hello everyone!

We are entering the last quarter of 2021!

Here's to hoping it's the last of Covid too!

While we can't be certain about that, we sure can vaccinate faster and get to a stronger India sooner.

It's October and the time for Navratri nights and lots of cheer and joy.

We are very practical about our work life balance and know how to have our fun!

It's been an amazing time celebrating garba with the team.

We had many birthdays this month and were so pleasantly surprised by the way our team, our family planned and celebrated these days!

Life at Kaps3 is a mixed bag of work, fun and fulfillment.

And we are making this world a better place with every passing day.

Enjoy this month's issue and see you around Diwali!

Happy reading!

# HIRAL BHATT

FIELD EXECUTIVE

I am Hiral Bhatt,  
handling Kaps3 sales for **Godhra Dahod** belt. I have been with this amazing  
company **since 2012**.

I am sharing my experience working with Kaps3, At first we only knew St.  
Morison but in a very short time KAPS3 entered in the market with some  
great products.

KAPS3 entry in the market was like a hit movie and I think the main reason  
behind it was a huge number of products which were market leading and  
less competitive, and these were made by very well known manufacturers.

Whenever we required whichever product, we used to get it on short  
notice and in big lots to fulfil our orders.

And what I love about kaps3 most is if the product is very new and not  
available with us, Harshitbhai will launch it in a very short time. I heartily  
thank Kaps3 for everything.

“

It's been a happy journey since  
joining KAPS3.

”

# VIDYUT DAVE

FIELD EXECUTIVE

Hello everyone!

I am a member of the Kaps3 family since the past **10 years** now. If I look back at my time here, many things come to my mind.

I used the word family as that's how you feel here and you feel that you are performing for your own company.

It's encouraging to work in such an atmosphere and it just helps to reach your targets with more focus and you feel happy about it.

We do make many products, but we focus on making the products you prefer more.

Its definitely a huge plus that we make a large selection of products. But also at the same time, our products are made at the **most well-equipped** and industry leading companies that make similar products for **India's top brands**. This is a major USP of Kaps3 products.

Our recent products like **Prasuwil-10**, **Tilokk-90** etc prove that we make unique products with newest molecule combinations. This also aids in gaining more trust with our doctors.

Team Kaps3 works towards betterment of all processes at all times. And that makes working here such a pleasurable experience.

A Blood Thinner Preparation

## TILOKK-90

Ticagrelor IP 90mg Tablets

Newly Developed Technique For Weekly Medication Schedule **On Strip**

## VIRAL HEPATITIS

### What is Viral Hepatitis?

- It is a liver inflammation due to viral infection.
- They are of two types.
- All are RNA virus.
  - Acute Viral Hepatitis (More than 90%)
  - Chronic Viral Hepatitis

### Viral Hepatitis in Detail:

- Chronic Viral Hepatitis occurs with only Hepatitis – B and Hepatitis – C, not with A,D, and E.
- Viral Hepatitis are due to A, B, C, D, E(remember your alphabet). In this, Hepatitis D is always associated with Hepatitis B, never occurs alone.
  - Faeco – Oral route is the source of infection in Hepatitis A, D, E. This virus infection is self – limiting with full resolution.
    - In Hepatitis B and C, source of infection is B. T., IV Set, Injections, Sexual intercourse, breastfeeding, surgical instruments, and drug abusers. These viruses go for Chronic Hepatitis.
    - Vaccines are available for Hepatitis A and B and are very useful for prevention of Viral Hepatitis.
    - Definition of Chronic Hepatitis is, when liver inflammatory marks remain high for more than six months(e.g., S.G.O.T., S.G.P.T., G.G.O.T, Ser.Bilirubin )
    - 10% of cases of Chronic Hepatitis, progresses to portal cirrhosis and Hepatocellular carcinoma, so it is very necessary to diagnose and treat all cases of Chronic Hepatitis to prevent lethal complications. If treated promptly Hepatitis C and Hepatitis B is curable with long treatment of promptly 6 months to 1 year. That will prevent lethal complications of portal cirrhosis and Hepatocellular carcinoma.
    - All Hepatitis have initial phase, followed by active phase and then recovery phase. On an average, it takes 4 to 8 weeks to be normal. All inflammatory markers go on rising, like S.G.P.T., S.G.O.T. in initial and then in acute phases, and then gradually becomes normal. It is a normal cycle in all cases.
    - For all Viral Hepatitis, there is no specific anti – viral drugs, so only symptomatic treatment and supportive treatment are there:
      - Rest
      - Boiled water, more liquid, glucose water, lemon juice
      - Avoid fatty diets(ghee, oil, fried foods, butter)
      - B. Complex, vitamin C
      - Well – known Ayurvedic products Liv – 52 (It's up to you, whether to give or not to give)
      - ઘણા વર્ષોથી Adv. કરે છે. દાળિયા, શેરડી, નાળરચેડિ
      - More fruits, vegetables
      - For fever, if necessary, paracetamol can be given, 1 to 2 tablets per day.
      - No role of Antibiotics, unless it is necessary for secondary infections
      - I. V. Glucose, up to you to decide, as such no role, unless, unable to take food orally.

• **For prevention:**

- o Boiled or R. O. water
- o Proper hygiene, washing of hands properly after food and after going to toilet.
- o Regular check up for Hepatitis B and C, in all blood donation, blood transfusion, preoperative.
- o Proper sterilization of syringes, needles and instruments.

• **Vaccination for prevention of Virus A & B:**

o For Hepatitis – B

- Inj. Engerix (GSK) (0.5 and 1 ml)

▪ Dose:-

- In children 0.5 ml i.m.
- Repeat after 1 month and after 6 months
- In adults, 1 ml i.m., repeat after 1 month and after 6 months. Booster dose every 5 years.
- Neonates born with HBeAg positive, from mothers. Inj. Engerix 0.5 ml, along with Hepatitis B Immunoglobulin, both at different sites for injections.

o For Hepatitis – A

- Inj. Harvix (GSK)

- To be given in children after 1 year of age

▪ Dose:-

- 1 Inj. im, booster dose of 1 ml after 1 year
- Effects last to 10 years.

• **We have no vaccines for remaining virus C, D, E**

• **Hepatitis E infection during pregnancy, causes multiple problems like abortion, still birth, premature delivery.**

• **Laboratory tests in Acute Viral Hepatitis:**

- o Liver Function Test
- o Urine for Bile salts, bile pig
- o Sonography of abdomen

• **For detection of specific virus:**

- o Anti. HAV antibody(IGM)
- o Australian Antigen(Hepatitis B surface antigen)
- o Anti. HEV antibody(IGM)
- o Anti. HDV antibody(IGM)
- o Anti. HIV antibody

• **Symptoms:**

- o Anorexia
- o Nausea
- o Vomiting
- o Body ache
- o Weakness
- o Lethargy
- o Yellowed – eyes
- o Deep coloured urine
- o Clay coloured stool
- o Fever or feeling of Feverishness
- o Abdominal pain (At times, symptoms changes)

## Vitamin D Deficiency in Childhood

*A Review of current Guidelines on Diagnosis and Management*

Vitamin D deficiency is considered to be the most common nutritional deficiency and also one of the most common undiagnosed medical conditions in the world. It has been estimated that 1 billion people worldwide have vitamin D deficiency or insufficiency.

Over the last two decades, understanding of vitamin D synthesis, function, diagnosis and treatment has changed remarkably. Let's us re-examine the traditional concepts and discuss vitamin D supplementation and management strategies for deficiency.

### Definition of vitamin D status:

Vitamin D status is classified on 25(OH)Cholecalciferol level

Severe deficiency	< 5 ng/ml
Deficiency	< 20 ng/ml
Insufficiency	21-29 ng/ml
Sufficiency	> 30 ng/ml
Toxicity	> 150 ng/ml

### Causes of vitamin D deficiency:

Vitamin D status is classified on 25(OH)Cholecalciferol level

- Decreased vitamin D synthesis – poor sun exposure, clothing, skin pigmentation, air pollution, altitude, use of sunscreen lotion
- Decreased nutritional intake – strict vegan diet
- Old age and obesity
- Decreased maternal vitamin D store
- Malabsorption – celiac disease, cystic fibrosis, biliary obstruction
- Decreased synthesis – chronic liver disease
- Increase degradation of 25(OH)D – drugs such as rifampin, isoniazid, anticonvulsants, steroids

### When to Treat?

Vitamin D therapy is necessary for infants and children who manifest clinical features of hypocalcaemia as a result of vitamin D deficiency or rickets and when vitamin D levels are in the deficient range even if asymptotic. The three stages of vitamin D deficiency are outlined, as mentioned in table..

Stages	Early	Moderate	Severe
S. Calcium	N/Low	N/Low	Very Low
S. Phosphorus	Low	Low	N/Low/High
ALP	High	High	Very High
PTH	High	Very High	Very High
25(OH)D	Low	Low	Very Low
1,25(OH)D3	N	High	N/Low/High
Radiography	Osteopenia	Rachitic Changes 1+	Rachitic Changes 2+

### Treatment Regimen:

Several therapeutic regimens have been attempted; short term administration or weekly or daily, well known is Stoss therapy includes daily 1000-5000 IU for weeks or single IM injection of 60,000 IU or 50,000 IU weekly for 8 weeks.

Smaller daily doses for longer period is reported to be more effective than short-term therapy. After completion of treatment maintenance dose has to be continued at 800-1000 IU/day till ALP returns to normal.

Along with this calcium supplements should give at 30-75mg/kg/day in two to three divided dose for 1 to 2 weeks.

For symptomatic hypocalcaemia IV calcium is given at 10-20mg of elemental calcium over 15 minutes.

Group	Daily regimen (8-12 weeks)	Weekly regimen (8-12 weeks)	Stoss therapy	Maintenance
< 1 mo	1000 IU	50000 IU	-	400-1000 IU
1-12 mo	1000-5000 IU	50000 IU	1-6 lakh IU over 1-5 days	400-1000 IU
1-18 yrs.	5000 IU	50000 IU	3-6 lakh IU over 1-5 days	600-1000 IU
>18 yrs.	6000 IU	50000 IU	3-6 lakh IU over 1-5 days	1500-2000 IU
Obese, malabsorption syndrome, on medication affecting Vitamin D	6000-10000 IU			3000-6000 IU

### Whom to screen:

The US endocrine society guideline recommends screening only population at risk. These includes ..

- Dark skinned infants, mother with vitamin D deficiency
- Poor growth & development
- Suspected cases of rickets, osteoporosis
- Chronic illnesses, malabsorption syndrome, TB, Sarcoidosis etc.
- On medication like steroids, anticonvulsant, antifungal

### Prevention:

- Routine screening and vitamin D supplementation to all the pregnant women.
- Preterm infants should be supplemented.
- Regular exposure to sunlight.
- Dietary intake of oily fish, cod liver oil, liver and organ meats are rich natural sources.
- Fortified food like milk and cereals with vitamin D.

# PERIODICITY

## PMS (Pre-Menstrual Syndrome)

Changes in your body's hormone levels before your period can cause physical and emotional changes.

This is known as PMS (premenstrual syndrome) or PMT (premenstrual tension).

There are many possible symptoms of PMS, but typical symptoms include:

- feeling bloated
- breast tenderness
- mood swings
- feeling irritable
- spotty skin or greasy hair
- loss of interest in sex

These symptoms usually improve when your period starts and disappear a few days afterwards. Not all women who have periods get PMS.

### Advantages of periodic cycle:

*These reasons will surely make you glad for your monthly visitor. Believe me if you are missing it, you are losing a part of yourself.*

- Menstruation causes iron loss. According to doctors losing iron via blood reduces the risk of heart diseases and increase your life span which make females live longer than men.
- It reassures you of normal functioning for healthy living, gives a check to your hormonal imbalance.
- Aid you a sense of well-being, as it helps remove waste from your body.
- Pain during cramps makes you resistant and tolerant towards pain to an extent in your life.
- It's the time when you get pampered the most with those tempting chocolates, ice-creams. And your loved ones are ready to handle mood swings too.
- You can always eat hungrily during your menstruation days because no matter what you eat you will surely shed few kilos by the end of these days.
- It's time to make love. As females have increased sexual desire during this period.

### **Disadvantages of periodic cycle:**

Women may at times experience problems or irregularities in their menstrual cycle. Common problems include:

#### **Amenorrhea:**

This refers to the absence of a menstrual cycle for at least 90 days. Contributing factors Amenorrhea period include pregnancy, breastfeeding, eating disorders, excessive exercising, and stress.

#### **Dysmenorrhea:**

This is sometimes severe menstrual pain. Possible causes include uterine fibroids, endometriosis and excessive levels of a hormone called prostaglandin.

#### **Abnormal uterine bleeding:**

This term includes any vaginal bleeding not considered normal for a menstrual period. This might include bleeding between periods or after sex, any vaginal spotting, unusually heavy or prolonged menstrual bleeding, and postmenopausal bleeding.

*In early pregnancy, some women will also experience what is referred to as implantation bleeding, as a result of the embryo attaching to the uterine wall. Implantation bleeding can be expected around 10 to 14 days after conception.*

*Implantation bleeding occurs as light, brown spotting and not the typical bright, red flow of a menstrual period. Implantation bleeding is short-lived and, for most women, requires no treatment.*

**to be continued..**
